

Foster Records in PetPoint

Foster pet records must be entered PetPoint Foster Module for to appear in the Maddie's Pet Assistant (MPA) data upload.

This online PetPoint support link should be able to assist in describing foster care functions:

<http://www.petpoint.com/help/iPad/foster.htm>

Testing

Create a 'fake' (test) pet in PetPoint's foster module. If the foster pet's data appears in the data import into Maddie's Pet Assistant (done twice daily), we'll know it's entered correctly. If you need more help re: foster records in your shelter management software, contact PetPoint's support team.

Foster Status

In order to get your foster pet and foster caregiver data into MPA, we will need "Foster Start Status" = "Completed." This let's us know that the pet has been successfully placed into a foster home.

Further clarification on Foster Date logic:

1. If Foster Start Status = 'Completed,' the animal is currently in Foster care. If = 'Pending,' 'Scheduled,' or 'Started/In Progress' then the animal is not yet in foster care/has not yet left the shelter.
2. Foster End Status is the reverse. If = 'Completed,' then the animal has returned to the shelter/is no longer in foster care as of the Foster End Date. If = 'Pending,' 'Scheduled,' or 'Started/In Progress' then the animal is still in foster care, and the end of foster care is tentatively set for the Foster End Date.

Details Tab

The details tab contains sections for entering the **Foster Start**, **Foster End**, Stage & Location Express, and **Foster Notes**.

Select	Animal #	ARN	Name	Species	Breeds	Foster #	Start Status	Status Date/Time	End Status	Status Date/Time
<input checked="" type="checkbox"/>	A23054161		Frosty	Dog	American Eskimo	NEW				

Apply Selection Record Count: 1 10 / Page

When a pet is placed into foster care this should be marked as complete
