

Cleaning Protocol for Giardia Positive Animals

Kennel Cleaning:

Clean last. Do not remove the pet from the kennel. Place the pet on either side of the guillotine door while you clean the opposite side.

Remove all items from the kennel, place in the designated area for soiled items. All items can be cleaned using current cleaning procedures, clean the food bowls/water buckets as usual using the recommended soaking time in bleach (10 minutes) and laundry can be washed the standard way (applying bleach to all loads).

Remove the fecal matter, place it in the trash can. Place poop scooper in the kennel, rinse the kennel and scooper thoroughly with water, and apply bleach to the entire kennel including the poop scooper, let the bleach sit for 10 minutes, rinse thoroughly, repeat on the opposite side, once the pet is on the clean side.

Cage cleaning- Remove all items as stated above, Spray the cage walls and door, let sit for 10 minutes. If heavily soiled, use dish soap to remove, then apply bleach. Wipe all areas dry.

Foamer setting when using bleach is # 3 (You must thoroughly rinse out the foamer before adding bleach)

Mop buckets- 4 oz of bleach per gallon of water

Spray bottles (Size 32 oz)- 1 ounce of bleach (Cage cleaning only)
